

Travel Tips for Horses: When and how to use supplements

Neigh-Lox® Original Formula

Neigh-Lox aids in the maintenance of a normal stomach environment that reduces the risk of gastric ulcers. Its long-acting ingredients neutralize excess acid and coat the stomach lining for up to 8 hours.

Horses should be started on Neigh-Lox at least 3 days prior to traveling and remain on the supplement throughout.

Recommended dose: 2 scoops in the morning and 2 scoops in the evening.

It can be fed alone or with concentrates, fiber pellets or beet pulp.

Neigh-Lox® Advanced

Neigh-Lox Advanced's multi-pronged approach supports complete GI tract health. It reduces the risk of gastric and colonic ulcers, digestive upset, and hindgut imbalances.

Horses should be started on Neigh-Lox Advanced 10 days prior to travel, and then continue feeding throughout.

Recommended dose: 2 scoops in the morning and 2 scoops in the evening. It can be fed alone or with concentrates, fiber pellets or beet pulp.

Summer Games® Electrolyte

Summer Games contains both electrolytes and trace minerals that support electrolyte replacement and proper hydration during times of stress or hot weather. It also sustains adequate water intake during trips.

Horses should be fed Summer Games Electrolyte both while traveling and daily when exercised or exposed to hot conditions that result in sweating.

Recommended dose: at least 1 ounce (1 scoop) per day mixed into their feed. Levels can be increased as weather and workload dictate.

Recommended intake (oz/day):

| Level of Training | Normal Environment oz/day | Hot, Humid Environment oz/day |
|-------------------|------------------------------|----------------------------------|
| Rest | 0 | 1 |
| Light | 1 | 1-2 |
| Moderate | 2 | 2-3 |
| Heavy | 3 | 3-4 |

1 scoop of Summer Games = 1 ounce

Summer Games® Plus Paste

Summer Games Plus can be fed instead of, or along with, a daily dose of Summer Games Electrolyte powder.

When offering paste in addition to a daily dose of electrolyte powder, consider the total amount given during the day, and adhere to administration recommendations.

The amount of electrolytes in one tube of Summer Games Plus paste is equivalent to about 1.5 ounces of Summer Games Electrolyte powder.

Elevate® Maintenance Powder

Elevate was developed to provide a highly bioavailable source of natural vitamin E to horses. Vitamin E, a powerful antioxidant, limits the damage caused by everyday oxidative stress. It maintains healthy muscle and nerve functions, and supports a strong immune system in horses of all ages.

Horses should begin supplementation with Elevate Maintenance Powder at least 21 days prior to departure date. Keep feeding Elevate throughout your travels.

Recommended dose: for horses in light work 2,000 IU per day is recommended. Horses in medium to hard work can be fed 3,000 to 5,000 IU per day.

Elevate can be added to concentrates, fiber pellets or beet pulp.

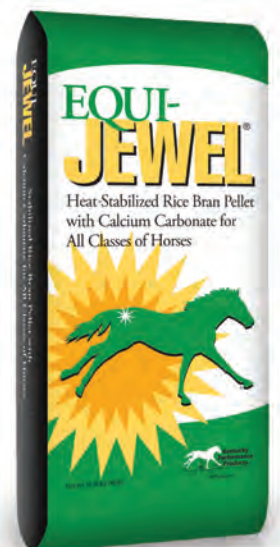

Equi-Jewel® All-Natural Stabilized Rice Bran

Equi-Jewel safely meets the energy needs of today's horses. It reduces the risk of digestive upset and supports optimal muscle function, while providing the calories your horse needs to get the job done and remain in good condition.

Introduce Equi-Jewel into the diet slowly over 5 to 7 days.

Recommended dose: ½ to 2 pounds per day, depending on energy needs.

Equi-jewel can be offered alone or mixed with concentrates, fiber pellets or beet pulp.
