

EndurExtra®

A blend of healthy fats

EndurExtra contains a blend of fats that include Equi-Jewel® rice bran, soybean oil, and flax.

- Fats contain 2.25 times the energy of carbohydrates.
- A diet rich in fat and fiber allows you to reduce the amount of starchy grains in your horse's diet and reduce meal size overall.
- With smaller grain meals horses become less prone to colic, laminitis, and insulin resistance-related disorders.
- Fats are considered a cool energy source; they reduce excitability and help horses remain calm and focused on their job.

Direct-fed microbials

Saccharomyces cerevisiae.....1,800 billion CFU/lb
Lactobacillus acidophilus.....100 billion CFU/lb
Enterococcus faecium.....70 billion CFU/lb

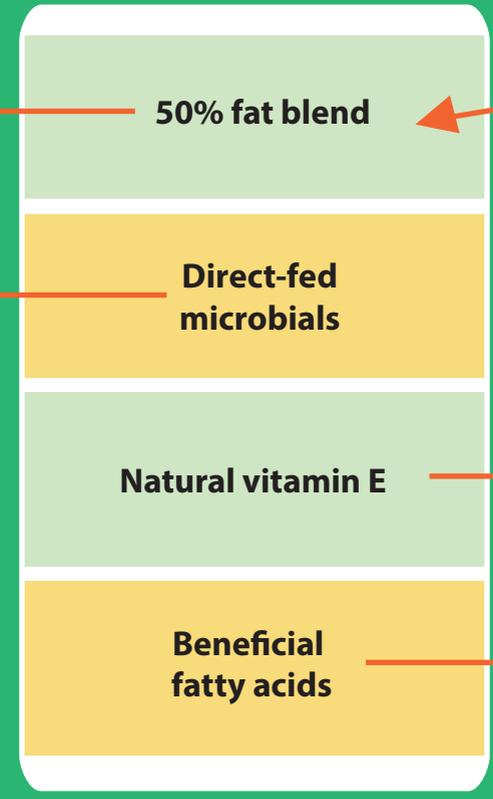

- Direct-fed microbials help to regulate pH balance in the GI tract, producing a hindgut environment that encourages beneficial bacteria to grow.
- Along with nutrient absorption, the GI tract plays a significant role in the horse's immune system.
- A horse with a healthier digestive tract is less likely to suffer from colic or laminitis.

Developed specifically to support weight gain and maintenance

EndurExtra® is recommended for:

- Hard keepers
- Performance horses, racehorses, and show horses
- Sales weanlings and yearlings
- Young horses in training
- Broodmares in late gestation and lactation
- Senior horses
- Horses that need extra calories in the cold winter months
- Horses recovering from injury, illness, or malnourishment

What's inside the bag?

Natural vitamin E

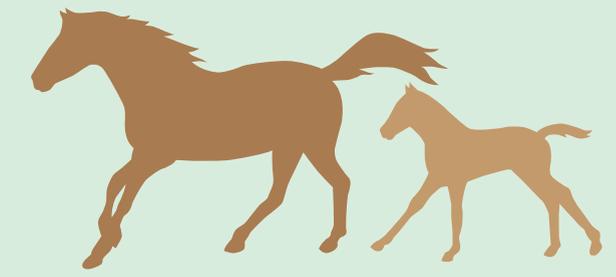

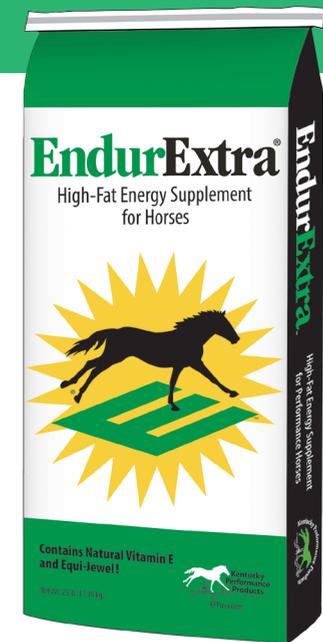

**Natural vitamin E (d-alpha tocopherol)
1,000 IU per 8 oz**

Vitamin E:

- Is an essential nutrient that must be added to the diet of most horses.
- Limits the damage caused by everyday oxidative stress.
- Maintains healthy muscle and nerve functions.
- Supports a strong immune system in horses of all ages.

Lecithin

- Lecithin is a beneficial fatty acid.
- Lecithin aids digestion, encouraging maximal absorption of nutrients.
- Lecithin also contains choline, a factor necessary in the production of acetylcholine. Acetylcholine is a critical component of the nervous system.
