

Managing Ulcers with Neigh-Lox[®]

Ulcers in horses—what we know today:

Equine gastric ulcer syndrome (EGUS) is a widespread problem among all horses. Many horses with ulcers show no outward symptoms. The prevalence of gastric ulcer damage has been documented in 93% of horses in race training, 70% of broodmares, in nearly 60% of other performance horses, and in 57% of all foals. Recreational horses are also at risk. Research has shown that ulcers can form in as little as 3 days. EGUS is a challenge faced by many veterinarians and horse owners.

What role does Neigh-Lox play?

Neigh-Lox has become one of the leading products of choice for maintaining a healthy stomach.

Neigh-Lox is a supplement consisting of a proprietary combination of ingredients designed to support normal gastric acid levels and maintain healthy stomach tissues. Neigh-Lox is not a cure for ulcers like omeprazole is, but a way to manage horses showing signs of gastric irritation. By maintaining a healthy stomach environment, horses are less likely to develop ulcers or have a relapse if they have been previously treated for active ulcers.

What makes Neigh-Lox unique?

Neigh-Lox has the capacity to maintain normal gastric pH for a long period of time (minimum 6-8 hours). Other products that manage gastric stress work for a much shorter period of time.

Neigh-Lox also contains an ingredient that coats the mucosal lining, which helps to maintain healthy tissues.

Neigh-Lox is easy to administer. Neigh-Lox comes in a palatable pelleted form and is eagerly consumed by horses, even those that exhibit poor appetite.

Supplementation with Neigh-Lox is recommended when:

- Horses are showing signs of gastric discomfort, poor appetite, sour disposition, chronic colic, or poor body condition.
- Horses are exposed to stressful situations such as relocating to a new home or competing at overnight horse shows.
- Horses are being prepped for sales or starting training.
- Horses have been previously treated for ulcers.
- Horses have been successfully treated for ulcers with medications such as omeprazole; they will often redevelop lesions when the medication is discontinued. Neigh-Lox helps maintain a healthy gastric environment, reducing the risk of ulcers developing.
- Horses are being transported. No matter what the distance, shipping causes anxiety in horses. Adding Neigh-Lox to a horse's routine prior to, during, and after shipping helps maintain a healthy stomach.

Neigh-Lox is an excellent choice as a general maintenance product for horses and foals.
